

Product Update

ELD and Unidentified Records

The ELD rule clearly requires the tracking of all unidentified records (driving, engine power up, engine shutdown, malfunctions), however the FMCSA is now saying that the assigning of unidentified driving records is a must, while the assigning of engine power up, engine shutdown and malfunctions is not required. With this in mind, Pedigree Technologies has updated the unidentified record management to focus on the unidentified driving records (rather than all unidentified records) to simplify things for ELD users.

Update Compliance tab to show count of Unidentified Driving Records (as opposed to all unidentified records)

New column added for Unidentified Driving Records in the Unidentified Records module.

Unidentified Driving Records			
Vehicle	Region	Unidentified Driving Records	Unsynced Driving Records
1015	Fargo > Trucks	2	0
155	Fargo > Trucks	7	0
27	Trucks	17	0
201	Fargo > Trucks	1	0
Shelly's Simulator	Fargo > Simulators	4	0

When you click on Unidentified Driving Records for any tractor, the window to assign them will still show all unidentified records but you will also see the separate column for just the Unidentified Driving Records Count.

Vehicle	Date	Time	Start Location	End Location	Kilometers	Total Unidentified Record Count	Unidentified Driving Record Count	Notes
27						41	17	Assign All View Records +
Driving	Tue 24 Apr 2018	12:46 am - 01:16 am	4.35 km. ESE of Greeley, CO	4.35 km. ESE of Greeley, CO	161 km.	3	1	Assign All View Records +
Driving	Tue 24 Apr	01:31 am -	4.35 km. ESE of	4.35 km. ESE of	161 km.	2	1	Assign All View Records +

Assigning of unidentified records should allow for the editing of other fields in addition to notes.

After choosing who to assign records to, the notes option has changed to include adding the Shipping Document Number, Carrier, Trailer, and Notes. Be sure to add each of these fields.

Add Details for Unidentified Records

- ▶ Shipping Document Number: None
- ▶ Carrier:
- ▶ Trailer: None
- ▶ Notes: None

Ability to add notes to unidentified records that haven't been assigned

For unidentified records that you choose not to assign to a driver, such as vendor related records, you have the ability to add a note to that record and can then filter out all records with notes in the future.

Add Note to Multiple Records from the main records manager window.

Add Note to a single record

Unsynced unidentified record count now shown on unidentified record module on compliance page

Unidentified records on ELDs do not sync to OneView until a tablet has been signed into and connected to that ELD so OneView now shows the count of unsynced unidentified driving records.

Vehicle	Region	Unidentified Driving Records	Unsynced Driving Records
1015	Fargo > Trucks	2	0
155	Fargo > Trucks	7	0

OneView inserts that are blocked due to driving time will prompt the user with the next available time that a non-driving record can be inserted

POV

Unidentified record count now only counts driving records

Only the number of unidentified driving records will show in the count, but when a driver looks at their unidentified records, they will still see all of the relevant unidentified records.

Date/time picker in POV when inserting a record is now only a time picker to limit date mistakes

Show a sync prompt when a driver goes off duty

This Sync Status will appear to remind the driver to let their logs sync before powering off the tablet

Updated sign out options reminding them to go off duty when signing out

Right after tapping the sign out button, if the driver is not in Off Duty status, they will see a prompt to update their duty status before they sign out. The driver can choose "Skip" to stay in your current status or select a different status and choose OK.
